

Smartalock is a modern electronic lock system designed to make storage furniture intelligent

Personal storage solutions for the workplace are changing rapidly with the advent of Activity Based Workplaces. Flexible working is leading to the sharing of individual desks and the reduction of per-employee storage at the desk itself. Employees need dynamically assigned lockers, placed near where they are working which may change each day. Teams need access to shared yet secure storage for group projects, all the while employers need to see real floorspace cost savings at the same time as improved workplace productivity.

Agile Working (ABW)

Schools and Universities

Gyms

Likewise Schools and Universities are looking for semi-permanent student storage that is secure, proximate and hassle free to maintain as students come and go. Students working on joint projects need shared lockers without the hassle of keys - ideally enabled and disabled by their smartphone. Sports Facilities want to offer gym goers a premium changing room facility with in-locker USB charging and other value added services, all while reducing both floor space and maintenance. No more bolt cutters!

The Smartalock Solution:

Combining intelligent lock hardware with powerful applications in a complete package - Smartalock can be used in both existing storage lockers, or with no visible lock or handle required, with seamless locker furniture designs that blends into walls, floor consoles or any custom furniture a fit out requires.

Card + Smartphone + Kiosk = All Bases Covered

Smartalock works with existing building access cards, our free Smartphone application (via Bluetooth) or via the included touchscreen kiosk. Users get access to lockers via any or all of these methods. No Phone? Lost swipe card? Use PIN to access locker from the touchscreen.

Smart Design with Solid Hardware

Designed in New Zealand by experienced furniture manufacturers in conjunction with experts in electrical engineering and software development. Smartalock Hardware works simply and seamlessly to provide a secure storage solution that adjusts to business needs over time.

Powerful User Applications All Included

The Smartalock App extends the functionality of a traditional locker by integrating features not possible even with other so-called smart-locker systems. Need to share access to a locker dynamically? Just tap Share. Want all lockers to automatically open every second Sunday at 11pm (ie for the cleaners)? Anything is possible.

Ultra Low Maintenance

Unlike Battery powered locks, Smartalock is mains powered (with optional UPS backup). No yearly replacement of hundreds (even thousands) of battery's, and no disposal issue for toxic products. Smartalock operations are also low maintenance - Adding and removing users, lockers, or swipe cards to the system are all easy

Innovative Locker Hardware

Front Side Indicator Light
At-a-Glance locker availability and state

Internal Bright LED Lighting
See whats inside the locker even in low light environments

Left or Right Side Mounting
Suits all door configurations and locker types

Built in USB Charging Port
Charge up Phones and Tablets while left in the locker

Soft Open Door Plunger
Allows for handleless locker doors and seamless design

Power Out Mechanical Release
Emergency access via special tool possible (will trigger remote alarm)

Powerful Controller

Power and Data in One
Simplified cabling system carries power and data in single standard Cat5E cables

Integrated WIFI
Optional connection to Office WIFI network for remote Admin (not required for operation)

Touchscreen Kiosk
Access and control lockers without Smartphone or Access Card

Integrated Ethernet
LAN port included for optional connection to customer LAN

Built in Card Reader
Reads practically every available card type - 13.56Mhz and 125KHZ

Bluetooth Technology
Uses 4 Bluetooth Radios for multiple concurrent access, iBeacon discovery and control

Beautifully Simple Software

Shake to Unlock
Open lockers by approaching the locker area and simply shake the smartphone

Powerful Admin Operation
Complete control over Fixed vs Dynamic Lockers assignment, use rules and cleaner access

Geo Fenced Reminders
Uses Smartphone GPS, time of day and corporate policy to send clear locker reminders.

Simple Setup
Wizard based first time configuration and intuitive ongoing operational interface

Intelligent Locker Sharing
Share access to single lockers amongst multiple Smartalock App users via SMS or email

Built in Analytics
Improve locker placement, locker to user ratios and make floor space savings over time

Designed, Assembled and Supported in New Zealand

Agile Workspace is a New Zealand based company. We have designed Smartalock from scratch and perform all design and final assembly in our Auckland premises. We stock, configure and support Smartalock installations worldwide from Auckland. Come visit for a demo anytime.

Environmentally Sound

Special care has been taken to ensure the production of Smartalock hardware uses recyclable plastics, lead and mercury free PCB circuit board and components. All product is RoHS certified. All packaging is kept to the minimum required
